

Northfield Construction's transport policy integrates the common characteristics of vehicles and driveable plant with the intent of providing clear expectations to those responsible for managing and conducting: user checks, inspections, servicing, defect repairs, driver and operator competence, monitoring and risk control during operations.

Northfield Construction's directors are committed to the application and continued improvement of its management system and expect that all managers and staff adhere to the arrangements contained within the policy to ensure a safe, effective, legally compliant transport and plant operating system.

The company's organisation, its responsibilities and competence requirements are stated within the policy arrangements for 'Transport, Plant and Fleet Management' (3.54) and the 'Competence Management System' (3.1). Additional driver and operator specific instructions are provided in the 'Drivers' Handbook' (arrangement 3.51).

By the application of this policy, it is Northfield Construction's objective to have no transport or plant related accidents or RIDDOR reportable incidents.

This policy will be reviewed annually or upon identifying opportunities for improvement.
